Group II: Claims 81-93 are directed to isolated nucleic acid molecules encoding soluble CTLA4 mutant molecules, and vectors, host cells, methods of producing the mutant molecules; classified Class 435, subclasses 69.1, 455, 252.3 and 320.1.

Reconsideration of the Restriction Requirement is requested for the following reasons:

Applicants point out that under MPEP §803, there are two criteria for a proper requirement for restriction, namely: (1) the invention must be independent and distinct; AND (2) there must be serious burden on the Examiner for restriction to be required.

Applicants respectfully contend that the second requirement of §803 has not been met. The Patent Office has not demonstrated a serious burden for searching the art of Groups I and II. The Examiner can perform a search on the entire application without serious burden. Thus, search of the art with regard to the invention of Groups I and II would not place an undue burden on the Examiner. Moreover, separate prosecution of these claims would be unnecessarily duplicative and thus wasteful of Patent Office resources. Therefore, under MPEP Section 803, the instant claims do not require restriction.

Applicants submit that claims of Groups I and II should properly be examined together for the reasons discussed above. Applicants respectfully request that the Examiner reconsider and withdraw the Restriction Requirement as these claims.
